To Whom It May Concern,

Polytechnic Early Admissions Exercise: Testimonial for Lau Zi Long Louis

I am pleased to provide this testimonial for Louis as he applies for Data and Analytics course through the Polytechnic Early Admissions Exercise. As Teacher-in-Charge of NEXUS@BTY, I have had the opportunity to work alongside him over the course of this A*STAR industry attachment programme.

Louis was part of a group that investigated whether classical piano music affects memory performance. The study involved designing a controlled memory test, collecting data across different participant groups, and analysing results by gender and role. His contribution was consistent and earnest as he engaged with the data meaningfully, worked to interpret the findings carefully, and showed a willingness to step up and take on responsibility within the team. He approached work with quiet diligence and a genuine commitment to seeing the project through.

Louis completed the NEXUS programme with a Certificate of Merit, reflecting consistent level of performance across research, presentation, and attitudinal components. I believe his interest in working with data, combined with his diligent work ethic, positions him well for further study in this area. I support his application and am happy to provide further information if required.

Thank you.

Warm regards,

Ms Nur'ain Hamzah
HOD Science
